

MINING

DIGGING, PROCESSING, TRANSPORTATION

Intza Lubrication Systems offers several solutions for mining and cement plants during digging, processing (furnaces, tromeles, lubrication of open pinions, etc.) or transportation of materials along bands. Heavy loads and large distances between greasing points are some of the challenges we solve with our robust design.

Additionally, and under customer request, **Intza Lubrication Systems** double line systems guarantee apart from robustness the most strict regulations of protection in potentially explosive atmospheres (ATEX).
